

Dear Reviewer:

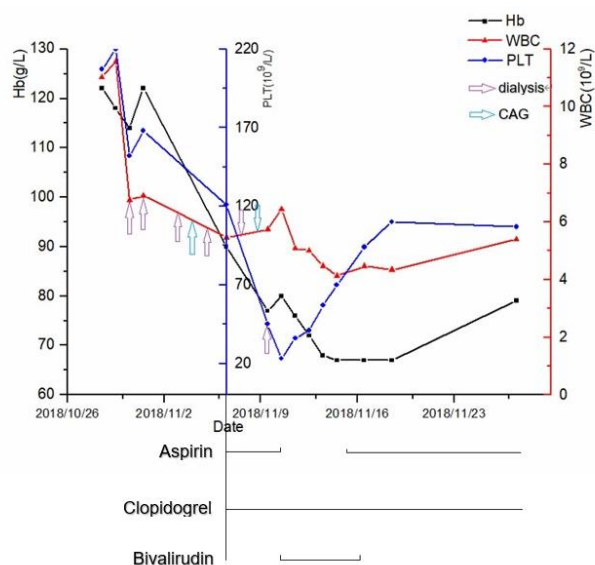

I am very grateful to your comments for the manuscript. According with your advice, we amended the relevant part in manuscript. Now I answer the questions one-by-one.

Q1. This reviewer agrees with the diagnosis of HIT. Although this patient has been on hemodialysis for 4 years with heparin, he has not developed HIT. The author should discuss why he developed HIT after PCI this time.

*Answer: To address this question, we verified the content of the article again. The patient described in the article had a 5-year history of chronic renal insufficiency, but received hemodialysis treatment four times before being transferring to our hospital, and all dialysis treatments were performed within 1 week before admission. Therefore, the history is not contradictory.*

Q2. Please describe the therapeutic agents in chronological order in Fig 5 for the readers to understand.

*Answer: We have modified Figure 5 to the following figure:*

Q3. The discussion is long, so please shorten it.

*Answer: The part of discussion is long. We condensed and subtracted the content. A revised manuscript with the correction sections had been submitted in the system.*

Thank you and all the reviewers for the kind advice.

Sincerely yours.
