Introduction

Neutrophil-Derived Extracellu...

Macrophage-Derived Extracellu...

Extracellular vesicles (EVs or microparticles) is a general term that refers to membrane structures released by all cell types through different biogenesis pathways; EVs are secreted after fusion of endosomes with the plasma membrane (exosomes), shed from plasma membrane (microvesicles), or released during apoptosis (apoptotic bodies).

These three entities differ in size (exosomes, 30–150 nm; shedding microvesicles, 150 ...

Mar 20, 2020 · **Extracellular vesicles** target recipient cells by surface molecules, and once attached, they can induce intercellular signaling via receptor–ligand interaction ; alternatively, they can be internalized by endocytosis and/or phagocytosis, or they can fuse directly with the **plasma** membrane releasing **their**

Therapeutic potential of extracellular vesicle-associated ...

<https://aiche.onlinelibrary.wiley.com/doi/10.1002/btm2.10172>

Both **extracellular vesicles (EVs)** and **long noncoding RNAs (lncRNAs)** have been increasingly investigated as biomarkers, **pathophysiological mediators**, and **potential therapeutics**. While these two entities have often been studied separately, there are increasing reports of **EV-associated lncRNA** activity in processes such as oncogenesis as well as tissue repair and regeneration.
