### Adaptation of international COVID-19 and breast cancer guidelines to local context

Valencia G, *et al.* Breast cancer and COVID-19 guidelines adaptation

#### Abstract

##### BACKGROUND

The COVID-19 (coronavirus disease 2019) pandemic caused by SARS-CoV-2 (a novel coronavirus) which was first identified amid an outbreak of respiratory illness cases in Wuhan (China) and declared a global health emergency, is currently considered an additional challenge in the management of patients with breast cancer (BC). Cancer patients are more vulnerable to becoming infected with SARS-CoV-2, as well as an increased likelihood of suffering additional complications that can increase mortality.

Identifying those BC patients who require more urgent therapies than others in the

## Breast cancer in the COVID-19 era | ESMO

<https://www.esmo.org/guidelines/cancer-patient...> ▼

Apr 09, 2020 · ESMO management and **treatment adapted recommendations** in the **COVID-19** era: **Breast cancer**. These **recommendations** aim to develop **guidance** to mitigate the negative effects of the **COVID-19 pandemic** on the **diagnosis** and **treatment** of **breast cancer patients**. The situation is evolving, and pragmatic actions may be required to deal with the challenges of treating patients, while ensuring ...

## COVID-19 Guidelines for Triage of Breast Cancer Patients

<https://www.facs.org/covid-19/clinical-guidance/elective-case/breast-cancer> ▼

Phase I. Semi-Urgent Setting

Phase II. Urgent Setting

Phase III.

Few COVID 19 patients, hospital resources not exhausted, institution still has ICU vent capacity, and COVID trajectory not in rapid escalation phase Surgery restricted to patients likely to have survivorship compromised if surgery not performed within next 3 months Cases that need to be done as soon as feasible (recognizing status of hospital likely to progress over next few weeks): 1. Neoadjuvant patients finishing treatment 2. Clinical St...
