SPECIFIC COMMENTS TO AUTHORS

To Authors This case report is interesting and can be useful reference in clinical practice. In the Abstract could be better defined the criteria employed in the choice of the type of chemotherapy. In the pathological history of the patients should be useful to report the indication for hepatic resection performed in the past and also some details of the pathological features of the lesion. The case report is clear and complete. The Discussion develops the most important aspects of this unusual case characterized by difficult diagnostic definition. The references are up-to-date. The tables and Figures are clear and appropriate.
