SPECIFIC COMMENTS TO AUTHORS

The authors aimed to use voxel-based morphometry (VBM) to analyze the whole-brain gray matter volume (GMV) data of patients with untreated bipolar disorder (BD) and unipolar depression (UD) compared with healthy controls. The study covers some issues that have been overlooked in other similar topics. The structure of the manuscript appears adequate and well divided in the sub-paragraphs. Some issues should be improved: Please provide the ethics committee number. Several typos should be corrected thorough the text. Conclusion Section is missing. Is necessary to add it (moving from discussion section), including some "take-home message".
