## **SPECIFIC COMMENTS TO AUTHORS**

In this article, the authors review the role of pancreatography in the endoscopic treatment of encapsulated pancreatic collections and propose a new classification system to aid in proper endoscopic evaluation and treatment. This work describes an interesting issue and agreed with the scope of the journal. However, it would need to be organized and structured differently. There are some sections that describe the state of the art: Indication, Time, Study Modality, Descriptors, Classifications, Approach to pancreatography findings. These sections must be merged into a single "Background" section. In the "Methods" section, the method followed to carry out the literature review should be explained in more detail. After the "New Classification proposition" section a new "Discussion" section should be added. In this new section it should be argued that the proposal that is made contributes over other existing proposals. It would be interesting, for example, to use a comparative table to compare the proposal with other alternatives. The conclusions should be rewritten to better reflect the work done. Finally, in the introduction, a paragraph should be added explaining the structure that the article will have and the content that will be described in each section.

#### **SPECIFIC COMMENTS TO AUTHORS**

This study reports the role of pancreatography in the endoscopic management of encapsulated pancreatic collections. This is a well-written manuscript. The newly proposed classification of encapsulated pancreatic collections based on pancreatography is clinically practical. However, there are two minor mistakes in the manuscript: 1. In Figure 4, there is no figure legend for Type IV pancreatography. 2. Page 38, NEW CLASSIFICATION PROPOSITION Type IV should alert for the possibility of DPSP and an image study - such as CT or MRI - must be performed to evaluate the pancreatic tissue beyond the disruption. If DPSP is confirmed,..... Should these two underlined words be changed to DPDS?

#### **SPECIFIC COMMENTS TO AUTHORS**

The study is aimed to clarify the role of pancreatography on the endoscopic management of encapsulated pancreatic collections and to propose a new classification system to aid in proper assessment and endoscopic treatment. The title is “The role of pancreatography in the endoscopic management of encapsulated pancreatic collections – literature review and proposal of a new practical classification (with video)”. 1. This is a review study. 2. Several factors influence the outcome of this management. Please discuss these. 3. Please add more details of the limitations of the study in the discussion section. 4. What is the new knowledge from this report? 5. Finally, please recommend the readers “How to apply this knowledge for routine clinical practice?”.
