SPECIFIC COMMENTS TO AUTHORS

In this article, the authors did a lot of screening, reporting a rare case of primary lung cancer with RAI uptake after thyroid cancer surgery. They also analyzed the possible mechanisms. These data have some meaning to clinical practice. Only two explanations are needed:

- 1.LINE195-198: The histologic types of these cancers were Adenocarcinoma (N = 27) , non-small Cell Carcinoma (N = 3) , Small Cell Carcinoma (N = 1) , adenosquamous lung carcinoma (n =1), and poorly-differentiated lung carcinoma (N = 1) . Please explain why non-small cell lung carcinoma does not include adenocarcinoma, adenosquamous carcinoma and poorly-differentiated carcinoma? What are the criteria for such pathological classification?
2. Line206-208: The histological types of lung cancer were Adenocarcinoma in eight patients and non-small-cell lung carcinoma in one patient. Please explain why non-small cell lung carcinoma does not include adenocarcinoma? What are the criteria for such pathological classification?
