Endoscopic management of blue rubber bleb nevus syndrome ...

https://www.researchgate.net/publication/258504768...

The blue rubber bleb nevus syndrome (BRBNS, syn. bean syndrome) is a rare disease characterized by multiple cutaneous and gastrointestinal venous malformations associated with severe bleeding.

Blue Rubber Bleb Nevus Syndrome with Long-Term Follow-Up ...

https://www.hindawi.com/journals/crigm/2018/8087659 -

Blue rubber bleb nevus syndrome (BRBNS) is a rare disease in which venous malformations (VMs) involve any body organ, most commonly the skin and the gastrointestinal (GI) tract. Treatment of BRBNS aims at preserving the GI tract as much as possible. Although there are several dozen case reports about BRBNS that describe short-term clinical courses, a few provide an account of long-term ...

Methods

Results

Discussion

Octreotide, 100 µg (5.7 µg/kg) subcutaneously twice daily, was initiated for persistent GI blood loss despite numerous surgical interventions. Octreotide dose was increased when transfusion requirements had increased for 2 consecutive months. Blood counts were monitored at least weekly and the patient received blood transfusions for a hemoglobin value of 8.7 g/L or less. Growth parameters, blood glucose concentration, pancreatic enzyme concentration, liver function, thyroid function, and growth hormone c...

Abstract

BACKGROUND

Blue rubber bleb nevus syndrome (BRBNS) is a rare vascular disease, difficult to diagnose and choose a treatment method, especially in young children. There are several limiting factors to the use of enteroscopy for diagnostics and treatment in
