#### **SPECIFIC COMMENTS TO AUTHORS**

This study is very interesting. The authors proposed to explore the effect of biofeedback combined with high-quality nursing in the treatment of functional constipation. The tables help the readers to make a more understanding of the study. The whole manuscript is well drafted; however, some concerns have been noted including: 1. The manuscript required a minor revision, both for the language and the format. 2. Tables required a minor editing of footnotes.

#### **SPECIFIC COMMENTS TO AUTHORS**

The method is described in detail. It can achieve a significant effect of biofeedback combined with high-quality nursing in treatment of functional constipation. The application of biofeedback combined with high-quality nursing in the treatment of FC has significant advantages over pure biofeedback treatment, and it is worthy of promotion in clinical work. Comments: The manuscript is overall well written; however, a minor language editing is required. The tables also require an editing.

#### **SPECIFIC COMMENTS TO AUTHORS**

Functional constipation is a physical and mental disease, which seriously affects the patients' physical and mental health and quality of life. Most patients have different levels of psychological disorders, often manifested as anxiety, depression, and compulsion. Authors proved that biofeedback combined with high-quality nursing has significant advantages in the treatment of FC, and it is worthy of popularization and continuous improvement in clinical work. Overall, the study is very well designed and the results are very interesting. The sample size is enough and methods are very clear. Discussion is good. I have a minor comment, the format of references should be modified.
