

Answer to Reviewers: World Journal of Gastroenterology Manuscript NO: 59954 – Notification on manuscript revision

Reviewer 1:

Many thanks for your very kind review. We agree that some of the factors influencing bowel preparation efficacy was not collected for our analysis. We have pointed out in the discussion that this is a limitation. We agree that some of the delayed side effects of bowel preparation have been missed but we also acknowledge that delayed side effects to bowel preparation is unlikely based on current evidence as outlined in our reference list.

Reviewer 2:

Many thanks for your kind review. With regards to your suggestions (1) The “Author Contributions” section has been completed, 2) Original pictures have now been submitted; (3) PMID and DOI numbers are included in the reference list and all references are included and (4) The “Article Highlights” section is now included.
