#### **SPECIFIC COMMENTS TO AUTHORS**

This is a well-written manuscript about the correlation between disease activity and sociodemographic characteristics in Brazil. In a large country like Brazil, I think it is not easy to write such a paper like this. I have some questions: 1. In Discussion (second paragraph, p.14), why there were different results between your study and the others? Please describe in detail. 2. Do you think your study make any difference about our daily clinical practice? What is your recommendation in IBD treatment if I practice in SE, S, or NE/MW in Brazil?
