**Manuscript Type:** ORIGINAL ARTICLE

### *Basic Study*

**Sinapic acid ameliorates D-GalN/LPS-induced fulminant hepatitis in rats: Role of Nrf2/HO-1 pathways**

Sinapic acid ameliorates hepatitis in rats

### **Abstract**

#### **BACKGROUND**

Sinapic acid (SA) has been shown to have various pharmacological properties such as antioxidant, antifibrotic, anti-inflammatory, and anticancer activities. Its mechanism of action is dependent upon its ability to curb free radical production and protect against oxidative stress-induced tissue injuries.
