Introduction . Solid pseudopapillary neoplasm (SPN) is a rare and indolent pancreatic tumor with low malignant potential which frequently occurs in reproductive-age females. Complete resection is almost always the curative option. Case Presentation . We present a 20-year-old woman with acute epigastric pain and vomiting in multiple episodes.

May 15, 2013 · Solid pseudopapillary neoplasm (SPN) of the pancreas is a rare tumor which typically affects young women without significant clinical symptoms. SPN usually shows an indolent behavior and only rare cases recur and/or metastasize after complete resection. We report our experience with four cases of SPN of the pancreas.

Apr 01, 2015 · Solid pseudopapillary neoplasm (SPN) of the pancreas is an uncommon tumor of the exocrine pancreas, occurring predominantly in young females. Unlike other forms of pancreatic neoplasm, SPN of the pancreas demonstrates an excellent long-term prognosis with adequate resection. With accurate preoperative diagnosis, surgical planning and intraoperative decision making are ...

<https://pubmed.ncbi.nlm.nih.gov/21105613>

Abstract. **Solid pseudopapillary neoplasm (SPN) of the pancreas** is uncommon, has low metastatic potential, typically afflicts young females, and expresses progesterone receptors. In the rare male patient, its biologic behavior may be more aggressive and lethal. A retrospective **case series** analysis and **literature review** of SPN was performed to compare its clinical behaviors in males and females.
