Oct 31, 2018 - Glucocorticoid therapy is used for the treatment of autoimmune alopecia, specifically alopecia areata/totails/universalis . It has no effect on androgenetic alopecia. Glucocorticoids are injected subcutaneously directly into the sites of hair loss and can require large number (i.e., >80) injections if hair loss is extensive.

Oct 01, 2017 - 3.1 Vitamin D. Vitamin D is a fat-soluble vitamin with a primary role in calcium and phosphorus homeostasis and bone health. Serum levels are primarily maintained through the UVB-mediated conversion of 7-dehydrocholesterol in the skin to cholecalciferol, which is hydroxylated in the liver and kidney to the active form of 1,25-dihydroxyvitamin D. Vitamin D can also be obtained from ...

## Abstract

## BACKGROUND

Alopecia areata (AA) is an inflammatory disease with autoimmune, environmental, and inherited components directed at the hair follicle, either limited to patchy hair loss over the scalp (Focalis, AF), or as total loss of scalp hair (Totalis, AT) or as total loss of both scalp and body hair (Universalis, AU). Despite multiple treatment modalities, no

<https://www.intechopen.com/books/alopecia/...> ▾

Oct 31, 2018 · In this chapter, we will explore non-surgical treatments of alopecia. Unlike many other areas of medicine, pharmacological treatments for alopecia are relatively new. There are only two treatments which are approved by the Food and Drug Administration (FDA); the rest are drugs developed for other indications which have gained popular off-label use to promote hair growth.
