mucocoele. The article is well written although some misspellings still persist. However, my main comment is about the general approach of the article. Despite the fact that the title places the focus on the endoscopic diagnosis and treatment, in the end the report is more a narrative review on appendiceal mucocoele. I would rewrite the case explaining in detail the endoscopic procedure for resection and opening the appendiceal cavity (technique, material, electrosurgical settings, etc.). Therefore, the discussion may be shortened, again focusing in the endoscopic procedure (other cases and techniques reported). Given that endoscopy is not the standard treatment for mucocoele, the reason to perform an endoscopic excision should be described as well.
