(PDF) Intracardiac bone cement embolism as a complication ...

<https://www.researchgate.net/publication/306271912...>

But CL remains a common complication of CAPSI, and the leakage rate is from 11.6% to 82.4% in bone cement-augmented pedicle screw fixation of the thoracolumbar spine [16,17], which may cause ...

Risk of cement leakage and pulmonary embolism by bone ...

<https://www.sciencedirect.com/science/article/pii/S1529943017300219>

Jun 01, 2017 · Cement-augmented pedicle screw instrumentation (CAPSI) of the thoracolumbar spine is indicated in osteoporosis or osteopenia to improve pullout strength and biomechanical stability of pedicle screws (PS). Only a few studies report on the incidence of pulmonary cement embolism or other complications associated with CAPSI.

Effect and potential risks of using multilevel cement ...

<https://bmcmusculoskeletdisord.biomedcentral.com/...> ▾

Apr 28, 2020 · The increase of augmented level and bone cement dose are accompanied by the rising incidence of cement leakage (CL) of cement-augmented pedicle screw instrumentation (CAPSI). But the effect and potential risks of the application of CAPSI to osteoporotic lumbar degenerative disease (LDD) have not been studied in the case of multilevel fixation.

Intracardiac, pulmonary cement embolism in a 67-year-old female after cement-augmented pedicle screw instrumentation: A case report and review of literature

Tong-Zhou Liang, Hai-Peng Zhu, Bo Gao, Yan Peng, Wen-Jie Gao

Abstract

BACKGROUND

To present a case of pulmonary and intravenous cement embolism after cement-augmented pedicle screw instrumentation in treating spondylolisthesis underlying osteoporotic bone, which was successfully managed by conservative
