SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of a rapid exchange extension catheter technique in type B2/C nonocclusive coronary intervention via a transradial approach. In this study, a total of 135 patients with type B2/C nonocclusive lesions who were treated via the transradial approach were enrolled. And the patients' clinical characteristics, indications for use of the rapid exchange extension catheter, procedural details were analyzed. The design of the study is described in detail, and the results are very good, and well discussed. References are updated. After a minor editing, it can be accepted for publication. 1. The aim of the study is missing in the abstract, please check and revise it. 2. Tables require an editing. 3. Limit of the study should in front of the conclusion, figures and tables should be moved to the end of the text.
