Successful endoscopic surgery for emphysematous pyelonephritis in a non-diabetic patient with autosomal dominant polycystic kidney disease

Jiang Y *et al.* Endoscopic surgery of emphysematous pyelonephritis

Yi Jiang, Richard Lo, Zhen-Quan Lu, Xiao-Bao Cheng, Lin Xiong, Bing-Feng Luo

Abstract

BACKGROUND

Emphysema pyelonephritis (EPN) is a very dangerous type of urinary tract infection. It is a lethal disease that develops rapidly and causes the patient to deteriorate rapidly, and it can easily lead to systemic infections and even sepsis. The incidence is extremely low, and it is prevalent in patients with diabetes. We here report a case of EPN in a non-

Successful medical treatment of acute bilateral ...

[https://www.ajkd.org/article/S0272-6386\(00\)70098-9/fulltext](https://www.ajkd.org/article/S0272-6386(00)70098-9/fulltext)

Emphysematous pyelonephritis most often presents as an acute medical emergency, typically in a septic diabetic patient with acute renal failure. The management of this condition has traditionally been surgical, with nephrectomy. However, some recent reports have described **successful** medical interventions. We describe a case of acute bilateral **emphysematous pyelonephritis** in a frail patient not ...
