## SPECIFIC COMMENTS TO AUTHORS

The manuscript is well written and presents an interesting case; however, in its current form, need amendments to address in its different sections. Introduction. Please mention what the challenges in the diagnosis and treatment of this clinical entity are. Case Report. Use a line graph to represent the improvement on some laboratory test and clinical scores, combine visual graphs with numerical data to facilitate understanding of evolution to the readers. Discussion The performance of MRI is mandatory for the diagnosis of long segmental myelitis and the followup. Explain to the readers why the patients did not undergo a 2nd and 3rd MRI. It has been evinced in the literature the usefulness of followup to document an improvement of spinal cord injury in animal models (include reference) at 1, 4 and 8 weeks. \*\*Delayed injection of polypyrrole doped with iodine particle suspension after spinal cord injury in rats improves functional recovery and decreased tissue damage evaluated by 3.0 Tesla in vivo magnetic resonance imaging. Spine J. 2017 Apr;17(4):562-73. MRI also allows a quantitative assessment of spine recovery (include reference below), why your department did not use this useful application if the patient got MRI at baseline? Feasibility of in vivo quantitative magnetic resonance imaging with diffusion-weighted imaging, T2-weighted relaxometry, and diffusion tensor imaging in a clinical 3-tesla magnetic resonance scanner for the acute traumatic spinal cord injury of rats: technical note. Spine. 2013 Sep 15;38(20):E1242-9. What is the policy in the hospital and country about the use of MRI assessment compared with the international literature? Why did the patient not underwent brain MRI to evaluate optic nerves enhancement? Mention it he 1st paragraph of this section, what is the clinical relevance of this report compared with previous cases in the literature.

## RE-REVIEW REPORT OF REVISED MANUSCRIPT
