SPECIFIC COMMENTS TO AUTHORS

COVID-19 is caused by the novel coronavirus SARS-CoV-2. Systemic complications include cardiovascular, neurological, hepatic, renal and altered coagulation. In this pictorial review, the authors describe the imaging findings in a multitude of extrapulmonary arterial and venous thrombotic phenomena detected on contrast-enhanced computed tomography and magnetic resonance imaging of COVID-19 patients which could not be attributed to any other causes. This is a very interesting topic. We recommend the authors can introduce the incidence or risk of systemic arterio-venous thrombosis in COVID-19 cases.
