Nemaline myopathy

Neuromuscular Disorder

Nemaline myopathy is a congenital, often hereditary neuromuscular disorder with many symptoms that can occur such as muscle weakness, hypoventilation, swallowing dysfunction, and impaired speech ability. The severity of these symptoms varies and can change throughout one's life to some extent. The prevalence is estimated at 1 in 50,000 live births. It is the most common non-dystrophic myopathy.

Jan 01, 2011 Here we report a 47-year-old man with congenital nemaline myopathy complicated with dilated cardiomyopathy-related heart failure, and restrictive respiratory failure. The complication of dilated cardiomyopathy in nemaline myopathy has rarely been reported. In this case, nemaline bodies were detected in the cardiac muscle fibers, demonstrating the presence of underlying disease-related ...

Jan 19, 2015 We report a rare case of a patient with recently diagnosed adult-onset NM who developed progressive heart failure (HF) with reduced left ventricular ejection fraction (LVEF) in which optimal titration of medical therapy was hampered by symptomatic hypotension. The adjuvction of ivabradine therapy had a decisive effect on the clinical course.

Nemaline myopathy with dilated cardiomyopathy and severe heart failure: A case report

Wang Q *et al.* NM with dilated cardiomyopathy and heart failure

Qian Wang, Fan Hu

Abstract

BACKGROUND

Nemaline myopathy (NM) is a rare type of congenital myopathy, with an incidence of 1:50000. Patients with NM often exhibit hypomyotonia and varying degrees of muscle weakness. Skeletal muscles are always affected by this disease, while myocardial involvement is uncommon. However, with improvements in genetic testing technology,
