## Epidural Hemato

Medical Condition

Accumulation of blood between the dura matter (tough outer membrane covering the brain), and the skull.

🏠 Common (More than 200,000 cases per year in US)

🧪 Often requires lab test or imaging

🩺 Treatment from medical professional advised

🕒 Can last several months or years

**Results** from head injury or blood vessel malformation. Symptoms include severe headache, confusion and loss of consciousness. Usually treated by urgent surgery called craniotomy or burr hole.

### Symptoms

- Severe headaches
- Dizziness
- Loss of consciousness
- Inability to move body parts
- Nausea and vomiting
- Confusion
- The pupil of one eye is enlarged

### Treatments

Treatment of epidural hematoma is an emergency situation and depends on the severity and other health conditions.

**Medical procedures:** Craniotomy · Aspiration

**Therapies:** Rehabilitation

### Causes

- Head injury in most cases
- Bleeding disorder
- Malformation of blood vessels
- Intracranial hypotension
