SPECIFIC COMMENTS TO AUTHORS

The present study focused on risk perceptions of contracting COVID-19 with CeD and tried to make clear the factors that may influence their perception. The study included 10,737 participants to complete the survey. The research ideas are innovative, and the research results can support the research conclusions. 1.The conclusion in the abstract is not concise enough and should be further condensed. 2.Table 2 is better in the form of pictures, such as pie chart.

SPECIFIC COMMENTS TO AUTHORS

This international survey was to investigate risk perceptions of contracting COVID-19 in patients with CeD and determine the factors that may influence their perception. Totally, this manuscript was very interesting, well-written and well-discussed. Several minor issues remained, which was showed below: 1. Language should be improved; 2. The format of table should be revised and unified; 3. The graph (draw by graphpad?) could be typesetted.
