#### **SPECIFIC COMMENTS TO AUTHORS**

This manuscript is an expert consensus for radiofrequency therapy technology in the department of pain. This expert consensus is very well written. In this manuscript, LIU et al reviewed the basic principles of radiofrequency therapy, commonly used radiofrequency therapy modes and parameters, principles and common therapeutic sites, complications and precautions of radiofrequency therapy for pain disorders. The structure of the manuscript is clear, and conclusion is reasonable. In my opinion, this manuscript can be accepted for publication after a minor editing of both the tables and main text. Some minor language polishing also should be revised.
