Fatal *Cryptococcus gattii* genotype AFLP5 infection in an ...<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3885943>

3. Discussion. *C. gattii* differs from the more commonly isolated *C. neoformans* in clinical aspects, ecological niche and genetic makeup. Unlike *C. neoformans*, it most often affects immunocompetent patients exposed to an environmental source causing pulmonary and cerebral infections. Furthermore *C. gattii* is known to be more resistant to antifungal agents.

Cryptococcal meningitis with pulmonary cryptococcoma in an ...
www.sciencedirect.com/science/article/pii/S0950268820300000
Clinical presentations of cryptococcosis differ between immunocompromised and immunocompetent person in which meningitis is predominant in HIV/AIDS positive patients, whereas in immunocompetent patients generally are asymptomatic or present with pulmonary disease. We report a case of cryptococcal meningitis secondary to pulmonary cryptococcoma in an afebrile and immunocompetent patient ...

An Unusual Case of Pulmonary Cryptococcus.
https://www.ncbi.nlm.nih.gov/pubmed/30788196
Dec 08, 2018 - However, cryptococcosis can occur as asymptomatic isolated pulmonary nodules in immunocompetent patients. Here we present a unique retrospective case report of a 55-year-old immunocompetent man who presented with pleuritic chest pain, productive cough, dyspnea on exertion, chills, night sweats, and weight loss.

PDF Pulmonary Cryptococcosis in Immunocompetent Patient – A ...
https://www.lungdiseasesjournal.com/articles/pulmonary-cryptococcosis-in-...
Pulmonary cryptococcosis is a rare infection in immunocompetent patients. Cryptococcal lung disease ranges from asymptomatic colonization or infection to severe pneumonia with respiratory failure. Clinical presentation of pulmonary cryptococcosis is highly variable and often is related to the immune status of the patient.

Oct 17, 2019 - Cryptococcus neoformans infection is the most common opportunistic infection in ICL patients, however typically presents with central nervous system (CNS) manifestations. Here, we present a case of isolated pulmonary cryptococcus infection in a patient with ICL, along with an accompanying review of the literature.

Cureus | An Unusual Case of Pulmonary Cryptococcus
https://www.cureus.com/articles/15677-an-unusual...
In immunocompetent hosts with pulmonary cryptococcal infection, an isolated nodule will often resolve spontaneously without antifungal treatment, but more advanced pulmonary disease requires treatment with fluconazole, and disseminated disease requires induction treatment with amphotericin and flucytosine. Here, we present a case report of a 55-year-old immunocompetent man who presented with symptomatic, diffuse pulmonary cryptococcosis ...

Disseminated Cryptococcosis in an Immunocompetent Patient ...
https://www.hindawi.com/journals/crpa/2012/652351...
Disseminated disease, especially noncutaneous cryptococcal abscess in immunocompetent hosts, is exceedingly rare. We report a case of disseminated cryptococcosis with soft tissue, pulmonary, and cerebral involvement in an otherwise healthy immunocompetent patient initially diagnosed by fine needle aspiration cytology (FNAC).

A Rare Case of Asymptomatic Cryptococcal Meningitis with ...
https://www.fortunejournals.com/articles/a-rare...
Asymptomatic Cryptococcal meningitis in the setting of Cryptococcal pneumonia is a rare finding in patients with Human Immunodeficiency Virus (HIV). We report a case of a young woman with AIDS who presented with symptoms of pneumonia and was subsequently found to have subacute cryptococcal meningitis. Case Report

Cryptococcus infection with asymptomatic diffuse pulmonary disease in an immunocompetent patient: A case report

Yong Li *et al.* Cryptococcal infection mimicking pulmonary malignancy

Yong Li, Lei Fang, Fang-Qun Chang, Fang-Zhou Xu, Yan-Bei Zhang

Abstract

BACKGROUND

Cryptococcus presenting as an opportunistic pathogen mainly affects immunocompromised patients, but the disseminated form of infection is rare among immunocompetent populations. The partial radiographic characteristics of pulmonary cryptococcosis mimic lung carcinoma, leading to unnecessary operations that
