SPECIFIC COMMENTS TO AUTHORS

The authors reported an interesting case of Double Outlet Right Ventricle (DORV) paired with severe erythrocytosis. The patient's characteristics, anesthetic management, and the in-patient follow-up were described adequately. In my humble opinion, this article can be a useful guide for other practitioners that could face similar challenging conditions. The manuscript title is clear and representative. The abstract is concise and reflects precisely the article's objectives and findings. The key words are suitable. The authors followed an excellent management course and reported the results in adequate manner. The discussion is well-written. All the ethical considerations are covered. I only two minor comments: 1) The background section of the main text is brief. I suggest adding more facts regarding the DORV prevalence, diagnosis, long term complications, and management. Since DORV is a rare condition, it would be better to mention these facts to make the article more comprehensive. 2) The language needs some revisions as I managed to encounter some grammatical faults. I suggest having it revised it by someone fluent in English.

The authors have carried out all the requested revisions. The background and the language quality were improved significantly. The scientific quality of the revised manuscript, its language quality, and the ethical considerations meet the publication requirements. I think the revised manuscript is suitable for publication.
