Manuscript Type: CASE REPORT

Combined immune checkpoint inhibitors of CTLA4 and PD-1 for hepatic melanoma of unknown primary origin: A case report

Chen AC *et al.* Immunotherapy for hepatic melanoma of unknown primary

An-Che Cheng, Yi-Jia Lin, Sung-Hua Chiu, Yu-Lueng Shih

Abstract

BACKGROUND

Melanoma is uncommonly found in lymph nodes, subcutaneous tissue, or visceral

[\(PDF\) Case report: reinitiating pembrolizumab treatment ...](#)

https://www.researchgate.net/publication/332639980_Case_report_reinitiating...

Immune checkpoint inhibitors targeting cytotoxic T-lymphocyte-associated protein-4 (**CTLA-4**) and programmed death-1 (**PD-1**)/ligand are increasingly used to treat several types of cancer.

[Complete intracranial response to talimogene laherparepvec ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5887256>

Keywords: **Melanoma**, Brain metastases, Talimogene laherparepvec, T-Vec, **Checkpoint inhibitors**, Anti-**PD1**, Anti-**CTLA4**, Nivolumab, Ipilimumab, Pembrolizumab Background Immunotherapy (IO) has changed the clinical landscape for patients diagnosed with metastatic **melanoma**, with **checkpoint inhibition** driving the dramatic improvement in clinical ...

[Immune evasion mechanisms and immune checkpoint ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5665072>

Aug 31, 2017 · Suppression of the cell-mediated **immune** response can occur as a result of upregulated inhibitory receptors, such as **PD-1** and PD-L1, on tumor and **immune** cells. PD-L1 is expressed on tumor and **immune** cells in both virus-positive and virus-negative MCC tumors, providing a rationale for investigating **checkpoint inhibitors** targeting **PD-1** or PD-L1 in ...

Durable Complete Response in a Melanoma Patient With ...

<https://pubmed.ncbi.nlm.nih.gov/33262949>

Monoclonal antibodies blocking **PD-1** and **CTLA-4** immunological checkpoints lead to durable tumor responses in a considerable number of advanced **melanoma** patients. Besides their anti-neoplastic efficacy, these **immune** checkpoint **inhibitors** cause a wide range of **immune**-related adverse events (irAEs), often enforcing an early discontinuation of therapy.

Biologic subtypes of melanoma predict survival benefit of ...

<https://jitc.bmj.com/content/9/1/e001642> ▾

Purpose Anti-programmed cell death protein 1 (**PD1**)±anti-cytotoxic T-lymphocyte associated protein 4 (**CTLA4**) **immune** checkpoint **inhibitors** (ICIs) are standard therapeutic options for metastatic **melanoma**. We assessed whether biologic subtype according to **primary** tumor type or genomic subtype can function as predictive biomarkers for anti-**PD1**±anti-**CTLA4** ICI in patients with advanced **melanoma** ...

Severe combined cardiac and neuromuscular toxicity from ...

<https://cardiooncologyjournal.biomedcentral.com/...> ▾

Sep 23, 2020 · **Immune** checkpoint **inhibitors** (ICI), including antibodies against cytotoxic T-lymphocyte associated antigen-4 (**CTLA-4**), programmed cell death-1 (**PD-1**), and programmed-death-ligand-1 (PD-L1), function to help the body overcome potential barriers to the recognition
