QTc Prolongation and Torsades de Pointes Associated with ...

<https://www.sciencedirect.com/science/article/pii/S0736467906006913>

Apr 01, 2007 · Case Report. A 52-year-old woman with a past medical history significant for human immunodeficiency virus (HIV), Hepatitis B and C, opioid dependency, and anxiety presented to the Emergency Department (ED) with fever and syncope. She complained of tactile fever, frontal headache, and a syncopal episode the night before presentation.

Torsades de pointes (TdP) is a potentially fatal polymorphic ventricular tachyarrhythmia, related to QT interval prolongation and it may present with palpitations, seizures, syncope, and sudden death, or may be asymptomatic if the duration is relatively short and terminates spontaneously.

Torsades de pointes

Specific Type

Torsades de pointes, torsade de pointes or torsades des pointes is a specific type of abnormal heart rhythm that can lead to sudden cardiac death. It is a polymorphic ventricular tachycardia that exhibits distinct characteristics on the electrocardiogram. It was described by French physician François Dessertenne in 1966. Prolongation of the QT interval can increase a person's risk of developing this abnormal heart rhythm.

<https://heart.bmj.com/content/103/22/1821> ▾

Nov 01, 2017 · Introduction. Torsade de pointes (TdP) is a polymorphic ventricular tachycardia occurring in patients with long QT syndrome (LQTS). It is life-threatening as it can degenerate into ventricular fibrillation (VF) and cause sudden cardiac death (SCD). TdP develops in patients with a markedly prolonged corrected QT (QTc; usually >500 ms), a condition in most cases requiring ...

The twisting of the points, although characteristic, may not always be seen, especially if the episode is nonsustained or if only a limited number of leads are available. Torsades de pointes can result from bradycardia including high-grade AV block that leads to a long-short sequence initiating torsades de pointes. Ventricular flutter S2.2.2-2
