Diagnosis of Crohn's Disease | NIDDK

https://www.nidDK.nih.gov/.../crohns-disease/diagnosis

What tests do doctors use to diagnose Crohn's disease? Your doctor may perform the following tests to help diagnose Crohn's disease. Lab tests. Lab tests to help diagnose Crohn's disease include: Blood tests. A health care professional may take a blood sample from you and send the sample to a lab to test for changes in, red blood cells.

Crohn's Disease

Medical Condition

A chronic inflammation of the digestive tract.

Rare (Fewer than 200,000 cases per year in US)

Requires lab test or imaging

Treatments can help manage condition, no known cure

Can be lifelong

The exact cause is unknown but heredity and malfunctioning immune system play a role. Common symptoms include abdominal pain, diarrhea, malnutrition and fatigue. Anti-inflammatory drugs and immune system suppressors help in long term remission.

Symptoms

Symptoms range from mild to severe and include:
