**Prevention of late complications with coverage agents in endoscopic resection of colorectal lesions: current landscape in gastrointestinal endoscopy**

Lorenzo-Zúñiga V *et al.* Coverage agents

Vicente Lorenzo-Zúñiga, Marco Bustamante-Balén, Vicente Pons-Beltrán

### Abstract

Endoscopic removal of large ( $\geq 20$  mm) non-pedunculated colorectal lesions (LNPCLs) might result in major adverse events, such as delayed bleeding (DB) and delayed perforation (DP), despite closing the mucosal defects with clips.

Topical application of a coverage agent refers to create a shield with a

THE AIM OF follow up after colorectal ESD/EMR is early detection of local residual/recurrence, metastasis, and metachronous lesions. 133, 134 Some studies have reported that endoscopic treatment for colorectal tumors decreased the incidence of colorectal carcinoma and the risk of mortality. 135, 136 Surveillance after surgical resection for ...

Jul 10, 2015 · Core tip: Endoscopic methods are replacing surgical options as the first line therapy for a wide array of gastrointestinal tract defects. Here we will review the available endoscopic modalities, their appropriate applications and their respective success rates. The fusion of standard surgical principles with flexible, intra-luminal modalities is likely to be the key to the successful ...

### Clinical Gastrointestinal Endoscopy | ScienceDirect

<https://www.sciencedirect.com/book/9780323415095>

**Endoscopic resection** (ER) of DA and PA is quickly becoming the **treatment** of choice for noninvasive **lesions**, even when they are very extensive. Although no systematic comparative data exist, due to the lower risks of morbidity, mortality, and long-term digestive dysfunction, ER is considered preferable to surgery.
