May 25, 2020 · SCP is an extremely rare malignant tumor of the pancreas comprised of two independent components: ductal adenocarcinoma and sarcomatous tissues. The WHO classification of exocrine pancreatic tumors (5th edition, 2019) assigns SCP and carcinosarcoma of the pancreas (CSP) under the category of undifferentiated carcinomas [1].

AbstractIntroductionCase ReportDiscussionReferences

Sarcomatoid carcinoma is a rare, high-grade epithelial malignancy composed exclusively or predominantly of spindle cells often having features suggestive of epithelial derivation without features indicative of a specific line of mesenchymal differentiation. Sarcomatous carcinomas occur in diverse locations throughout the body, including the upper respiratory tract, upper and lower digestive tracts, genitourinary tract, breast and thyroid glands, among others. Sarcomatoid carcinoma rarely presents in ...

Sarcomatoid carcinoma of the pancreas – a rare tumor with an uncommon presentation and course: A case report and review of the literature

Toledo PF *et al.* Sarcomatoid carcinoma of the pancreas

Paulina Fernanda Toledo, Zoltan Berger, Laura Carreño, Gonzalo Cardenas, Jaime Castillo, Omar Orellana

Abstract

BACKGROUND

Sarcomatoid carcinoma of the pancreas (SCP) is a rare type of pancreatic neoplasm, and only a few cases have been described in the literature. Histologically, it is composed mostly of atypical spindle cells with apparent sarcomatous features.

Introduction. Sarcomatoid carcinoma (SC) or carcinosarcoma (CS) is a rare and complicated malignant neoplasm that consists of both malignant epithelial components and atypical spindle cells that express an epithelial phenotype (1,2). SC or CS primarily occurs in the lungs, esophagus, breast, larynx, and gallbladder (). SC of the pancreas (SCP) is extremely rare.

May 25, 2020 · Sarcomatoid carcinoma of the pancreas (SCP) tends to have similar or even worse prognosis than that of conventional pancreatic ductal adenocarcinoma. The clinical and pathological features of SCP remain poorly characterized owing to its rarity. A 58-year-old man was admitted to our hospital with the chief complaints of upper abdominal pain and weight loss.
