SPECIFIC COMMENTS TO AUTHORS

The work is well written and methodologically correct and interesting in its intended purpose. The analysis of the proposed techniques is the result of a selection drawn from the well-chosen and documented literature on the subject. It will be interesting to follow its developments also and above all as regards gastric MALT lymphoma, in which the benefits of this technique can be maximized. For this reason, I was surprised that this argument has been only marginally treated in the paper. Apart from this consideration, as mentioned, I find this work stimulating and worthy of publication.
