**Use of technology and social media in dementia care: Current and future directions**

Current technology for dementia

### Abstract

As the population across the globe continues to dramatically increase, the prevalence of cognitive impairment and dementia will inevitably increase as well, placing increasing burden on families and health care systems. Technological advancements over the past decade provide potential benefit in not only relieving caregiver burden of caring for a loved one with dementia, but also enables individuals with dementia to age in place. Technological devices have served to improve functioning, tracking and mobility. Similarly, smartphones, tablets and the ubiquitous world wide web have facilitated the dissemination of health information to previously hard-to-reach populations largely

The 3 Nations Dementia Working Group (3NDWG) is a network of people living with dementia. They lead, and get involved in, regional and national projects, across England, Wales and Northern Ireland. The group wants to become the 'go-to group' for input from people with lived experience of dementia. The purpose of connecting virtually was 1. to enable the group to meet and progress their activities without the stress, time and expenses required to travel long distances to meet in person every time. 2. to reduce delays th...
