SPECIFIC COMMENTS TO AUTHORS

The title adequately reflects the main subject of the manuscript. The summary reflects well the work described in the manuscript. The keywords adequately reflect the focus of the manuscript. The manuscript adequately describes the history and importance of the study. The manuscript describes the focus of the research well but does not explain what was considered to be an early loss from follow-up, for example. The research objectives were achieved by the authors and the major contribution of the study was the description of the outcomes and the prognosis of the disease in this service. The manuscript interprets the findings appropriately and appropriately, highlighting the key points in a concise, clear and logical manner. And the findings and their relevance to the literature are presented clearly. The discussion is accurate and discusses the scientific meaning of the article and / or relevance to clinical practice, however only two articles cited as references are current. The illustrations and tables are sufficient, of good quality and adequately illustrate the content of the article. The manuscript meets the requirements of biostatistics. The manuscript adequately cites references in the introduction and discussion sections however few references were used and only two have less than 3 years of publication. The manuscript is well organized and presented in a concise and consistent manner. I did not find the STROBE Declaration - case-control study, observational study, retrospective cohort study - to verify the checklist. The authors sent the related formal ethics documents that were reviewed and approved by their local ethics review committee and the manuscript met the ethics requirements.

SPECIFIC COMMENTS TO AUTHORS

This manuscript is correctly structured and organized, as well as it is written accordingly to the guidelines provided by WJH. Both the tables and figures are clear and well designed. Although the study is retrospective and involves a small number of patients, due to the oddity of this tumor, it offers valuable information which might be useful in the management of this tumor.

SPECIFIC COMMENTS TO AUTHORS

I read through the manuscript entitled "Surgical treatment outcomes of primary hepatic sarcomas: A single-center experience" written by Kim, et al. with a great interest. Primary hepatic sarcoma is very rare tumor. There is only a few papers reported case series of primary hepatic sarcoma. The authors summarize their experienced cases well. Minor problem They firstly mentioned a total number of the patients is 43, but only nine cases are reported in the paper excluding only laparotomy cases. Change the number of the patients from 43 to nine in the abstract.
