Rapidly Progressing ALK-Positive Primary Pulmonary Anaplastic Large Cell Lymphoma Masquerading as Lung Infectious Disease: A Case Report

ALK-positive lymphoma presenting as lung infection

Abstract

BACKGROUND

Primary anaplastic large cell lymphoma of the lungs represents a diagnostic challenge due to diverse manifestations and non-specific radiological findings, particularly in cases that lack extra-pulmonary manifestations and lung biopsy.

CASE SUMMARY

A 40-year-old woman presented with a 6-day history of fever, dry coughing and
