SPECIFIC COMMENTS TO AUTHORS

1. Overall, the manuscript is very well written and highly relevant to clinical practice. The case highlights a challenging case of anaplastic large cell lymphoma masquerading as a pulmonary infection. The case report is interesting and well described by the authors. The discussion section is very thorough review of literature and appropriately highlights the disease in discussion. Overall an impressive case reports. 2. There is some redundancy in the case report discussion which can be removed (see tracked changes in the manuscript) 3. English grammar can be improved. 4. Add coronal section of CT chest showing multiple nodules as mentioned in the text. Please find attached revised manuscript with my comments and suggestions as tracked changes.
