were asymptomatic. In our case, the main symptom was abdominal distension and pain (10). Protein-losing enteropathy is an uncommon presentation of abdominal lymphangioma, which is already a rare disorder. One case re-ported a 32-year-old woman with hypoalbuminemia and colonic lymphangiomatosis. Another case report showed

Lymphangiomatosis associated with protein losing enteropathy: A case report

Ding XL *et al.* Lymphangiomatosis associated with protein losing enteropathy

Xue-Li Ding, Xiao-Yan Yin, Ya-Nan Yu, Yun-Qing Chen, Wei-Wei Fu, Hua Liu

Abstract

BACKGROUND

Lymphangiomatosis is a multisystem disorder that is rarely localized to the gastrointestinal tract. Lymphangiomatosis usually has no specific clinical presentation and is easily misdiagnosed. A review of a case report and literature on lymphangiomatosis associated with protein-losing enteropathy will help to improve the overall understanding of this disease.
