Epidemiological studies suggest a positive association between obesity and type 2 diabetes mellitus (T2D) with the risk of cancer and cancer-related mortality. **Insulin resistance, hyperinsulinemia, increased levels of IGF, elevated levels of steroid and peptide hormones, and inflammatory markers** appear to play a role in the connection between these different diseases.

Obesity, Type-2 Diabetes and Cancer: Mechanistic Insights

<https://pubmed.ncbi.nlm.nih.gov/32422026>

Obesity **represents the number one risk factor for type-2 diabetes** and a considerable body of epidemiological studies supports the relationship between type-2 diabetes and many cancers. In this...
