Novel "baby-in-mother" technique with the GuideLiner in ...

<https://www.ncbi.nlm.nih.gov/pubmed/27277536>

The use of 6-in-7 guiding extension catheter would have required removal of wire from the diagonal branch. To avoid this situation, we down-sized the extension catheter to 5Fr, which was successful in delivering the stent without removal of the wire from diagonal branch. We have also demonstrated this novel technique on ex vivo bench testing. PMID

<https://www.cureus.com/articles/17408-balloon...> ▾

Feb 11, 2019 - An innovative approach was used; a coronary guide extension catheter was used to enhance support and balloon-assisted tracking of the extension catheter then permitted advancement of the retrieval device and ultimate retrieval of the filter. This technique to retrieve a carotid filter has not been previously described in the literature.
