

PEER-REVIEW REPORT

Name of journal: World Journal of Gastrointestinal Surgery

Manuscript NO: 62821

Title: Comparison of the effects of the six main gastrectomy procedures on patients' quality of life assessed by PGSAS-45

Reviewer's code: 03017791

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: China

Author's Country/Territory: Japan

Manuscript submission date: 2021-01-19

Reviewer chosen by: Jin-Lei Wang

Reviewer accepted review: 2021-01-23 13:12

Reviewer performed review: 2021-01-26 03:00

Review time: 2 Days and 13 Hours

Scientific quality	<input type="checkbox"/> Grade A: Excellent <input type="checkbox"/> Grade B: Very good <input checked="" type="checkbox"/> Grade C: Good <input type="checkbox"/> Grade D: Fair <input type="checkbox"/> Grade E: Do not publish

SPECIFIC COMMENTS TO AUTHORS

The authors evaluated the post-gastrectomy quality of life by analyzing the questionnaire (PGSAS-45) of 2368 patients received 6 different surgical procedures, found that TGRY had the worst postoperative QOL score, and LR had the highest postoperative QOL score. In addition, the QOL of PG was worse than that of PPG, DGBI, and DGRY, and the postoperative QoL of PPG was slightly better than that of DGBI and DGRY. 1. For LR, some patients those not diagnosed as carcinoma were enrolled in this study. For these patients, please state that if the targeted therapy was applied or not; 2. The surgical procedure was decided by the tumor stage, site and size, please define the clinical significance of this study of which the QoL of TG, DG or LR were compared. 3. The enrolled patients were early gastric cancer according to the inclusion criteria, while the TG(393case) proportion was bigger than PG proportion, please define this. 4. The enrolled patients comprising open and minimally invasive surgery while the proportion of laparoscopic surgery was different between the six groups, which might affect the result.
