#### **SPECIFIC COMMENTS TO AUTHORS**

Overview The authors reported a case with secondary renal transplantation after allograft nephrectomy due to malignant tumor which was subsequently identified to be ChRCC. The level of writing and the quality of content is sufficient for a case report. They provided the limitations of this report as two questions at the final part of the text. Specific comments for authors 1. Concerning references for the R.E.N.A.L nephrometry score, reference No 10 has no information. The authors should provide a sufficient reference for this issue. 2. In addition, concerning references for the TNM classification, reference No 11 has no information. The authors should provide a sufficient reference for this issue.

#### **SPECIFIC COMMENTS TO AUTHORS**

Wang et al presented this interesting case of ChRCC, the paper is well written and I have only a few comments

1. Under the "Laboratory Examinations" section, I guess it should be Feb 2, 2016, instead of 2006.
2. Under the " Treatment" section- HLA mismatch of 2, was that out of 6 ( -A, -B, and -DR ) or of 12, please clarify.
3. Not sure what is complement-dependent cytotoxicity was 2%- was crossmatch performed based on CDC instead of flow? - please clarify
4. More importantly- under follow-up it was mentioned that until his recent follow-up, his graft function was stable- instead of graft function, I guess radiological imaging will be more important- please explain more about the monitoring plan, is it CT or ultrasound, and how often, any modification on the immunosuppressive medications, from the protocol- eg. lower tacro goal, lower myfortic dose, switching to mTOR inhibitors, etc.
5. Re-introduction of immunos after graft nephrectomy is new to me- as these patients will be on dialysis, and their risk of infections are too high- what was the targeted goal of tacro during dialysis

## RE-REVIEW REPORT OF REVISED MANUSCRIPT
