Hepatitis B virus (HBV) infection is a major public health problem worldwide. The World Health Organization (WHO) estimated that 257 million people were living with chronic HBV infection in 2015 and that hepatitis B results in 887 000 deaths every year worldwide.<sup>1,2</sup> To take action on sustainable development goal 3.3 on combating hepatitis, the World Health Assembly approved the global health sector strategy to eliminate viral hepatitis as a public health threat by 2030, wit...

Viral hepatitis

Liver Inflammation

Symptoms Diagnosis Causes Treatments

Viral hepatitis is liver inflammation due to a viral infection. It may present in acute form as a recent infection with relatively rapid onset, or in chronic form. The most common causes of viral hepatitis are the five unrelated hepatotropic viruses hepatitis A, B, C, D, and E. Other viruses can also cause liver inflammation, including cytomegalovirus, Epstein-Barr virus, and yellow fever. There also have been scores of recorded cases of viral hepatitis caused by herpes simplex virus.
