Diabetic Retinopathy

Medical Condition

A complication of diabetes where blood vessels in the eye are damaged. This may be with no symptoms initially but eventually may notice vision problems.

- 🏠 Very common (More than 3 million cases per year in US)
- 👨‍⚕️ Requires lab test or imaging
- 💊 Treatments can help manage condition, no known cure
- 🕒 Can last several years or be lifelong

Caused by damage to the blood vessels in the tissues of the retina, which is the layer of cells lining the back wall inside the eye. This layer senses light and sends signals to the brain to interpret what is seen. Symptoms include floaters, blurriness, dark spots in vision or dark areas in visual field. Mild and moderate cases do not require immediate treatment but are monitored and careful management of diabetes is advised. Advanced cases need treatment which may be either medical or surgical.
