Quality of Life After Curative Resection for Gastric ...

<https://pubmed.ncbi.nlm.nih.gov/32151826>

Quality of Life After Curative Resection for Gastric Cancer: Survey Metrics and Implications of Surgical Technique. Gastric cancer is one of the most common cancers worldwide, and radical gastrectomy is an integral component of curative therapy. With improvements in perioperative morbidity and mortality, attention has turned to short- and long-term post-gastrectomy quality of life (QoL).

Oct 24, 2017 · Gastric cancer is the fifth most common type of cancer worldwide [], and surgical resection is the cornerstone of treatment with curative intent. Because survival after gastrectomy for cancer has improved since the introduction of a more extensive lymphadenectomy and perioperative chemotherapy [2, 3], the quality of life following treatment has become increasingly important.

Observational Study

Health-related quality of life after curative resection for gastric adenocarcinoma

Health-related quality of life after gastrectomy

Abstract

BACKGROUND

With improved survival in gastric cancer patients, health-related quality of life has become an important clinical endpoint alongside primary oncological outcomes.

AIM

Our cross-sectional survey investigates health-related quality of life after various surgical procedures for gastric cancer treatment.
