

**[PDF] Successful treatment of a patient with Li-Fraumeni ...**<https://www.tandfonline.com/doi/pdf/10.4161/cbt.29173>

We report the case of a young, never-smoker woman with Li-Fraumeni syndrome and advanced lung adenocarcinoma refractory to multiple lines of conventional chemotherapy and negative for actionable alterations by routine testing. Comprehensive genomic profiling by clinical-grade next generation sequencing was performed on 3320 exons of 184

**Olaparib combined with immunotherapy for treating a ...**[https://journals.lww.com/md-journal/Fulltext/2020/09180/Olaparib\\_combined\\_with...](https://journals.lww.com/md-journal/Fulltext/2020/09180/Olaparib_combined_with...)

The next-generation sequencing identified a BRCA2 germline mutation in this patient. A poly (ADP-ribose) polymerase inhibitor, olaparib, plus nivolumab therapy was started and achieved stable disease. Outcomes: The patient achieved stable disease and improvement in hepatalgia for 3 months after the combination treatment of Olaparib and nivolumab.

The clinical record of a patient with BRCA2-mutated refractory advanced ICC treated with olaparib was analyzed. The patient was administered with olaparib (400 mg orally twice daily) and followed up for 11 months. The clinical tumor response was evaluated after 4 weeks of olaparib treatment, and then every 8 weeks (two treatment cycles).

#### Abstract

##### BACKGROUND

In recent years, targeted therapy and immunotherapy have become important treatment strategies for patients with non-small cell lung cancer (NSCLC). However, the clinical evidence for successful off-label use of targeted drugs for patients with NSCLC following progression on multiple lines of treatment is still lacking.
