An estimated 3.2 million people in the US have chronic hepatitis C (HCV) infection, making the pathogen the most common chronic blood-borne infection nationwide [Armstrong et al., 2006]. Chronic HCV infection is a strong risk factor for the development of hepatocellular carcinoma (HCC) [Colombo, 1999; Di Bisceglie, 1997; El-Serag and Mason, 2000; Thomas and Seeff, 2005; Tsai et al., 1994] and ...

Apr 11, 2011 · Hepatitis C virus (HCV) causes acute and chronic hepatitis which can eventually lead to permanent liver damage, hepatocellular carcinoma and death. Currently, there is no vaccine available for prevention of HCV infection due to high degree of strain variation. The current treatment of care, Pegylated interferon  $\alpha$  in combination with ribavirin is costly, has significant side effects and fails to ...
