SPECIFIC COMMENTS TO AUTHORS

Progress in the treatment of type 2 diabetes by bariatric surgery - The manuscript writing shows quality, is well ordered and the information presented is clear - This review contains information suitable for students, physicians, and surgical specialists. - The manuscript summarizes the systemic mechanisms induced after performing each of the bariatric surgery techniques. Below I describe my suggestions - The authors should emphasize that bariatric surgery is only indicated for obese diabetic patients. - Regardless of weight loss, is dyslipidemia associated with insulin resistance? Please include some insight about it - Do the pathophysiology of type 2 diabetes mellitus only refers to the hormonal role? - What are the effects of the surgeries described on the lipid profile of the patients? Please provide some insight on this regard. - I consider that a section discussing the three above points should be included.
