Room for improvement in the treatment of pancreatic cancer: Novel opportunities from gene targeted therapy

Galanopoulos M *et al.* Pancreatic cancer and gene therapy

Michail Galanopoulos, Aris Doukatas, Filippas Gkeros, Nikos Viazis, Christos Liatsos

Abstract

Pancreatic cancer is one of the highest and in fact, unchanged mortality-associated tumor, with an exceptionally low survival rate due to its challenging diagnostic approach. So far, its treatment is based on a combination of approaches (such as surgical resection with or rarely without chemotherapeutic agents), but with finite limits. Thus, looking for additional space to improve pancreatic tumorigenesis
