Celiac Disease

Medical Condition

A chronic immune disorder triggered by gluten ingestion. It results in damage of intestinal lining and causes diarrhea, fatigue, weight loss, bloating and anemia.

- Common (More than 200,000 cases per year in US)
- Often requires lab test or imaging
- Treatments can help manage condition, no known cure
- Can be lifelong

It is caused due to the immune reaction against gluten, a protein found in foods such as wheat, rye, barley and other grains. Symptoms include vomiting, appetite loss, bloating and constipation. The only way to manage this condition is to follow a strict gluten free diet.

Symptoms

The signs and symptoms may vary between children and adults. Mild cases do not show any symptoms. Some of the common typical signs and symptoms of celiac disease include -

- Vomiting
