Macroscopic assessment of mesorectal excision in rectal ...  
https://pubmed.ncbi.nlm.nih.gov/19479978  
In this study, the authors have aimed to audit the implementation of a macroscopic assessment of mesorectal excision (MAME) and to investigate factors that influenced surgical quality and disease recurrence. Methods: All curative resections for rectal cancer were prospectively evaluated for MAME between 1998 and 2007. Mesorectal specimens were ...

Review of Intersphincteric Resections for Rectal Cancer ...  
https://www.sciencegate.app/document/10.31487/j.scr.2021.04.03  
Apr 03, 2021 - Colorectal cancer is the third most common cancer, second most common cancer in women, and the fourth leading cause of death in the world. Radical surgical treatment with Total Mesorectal Excision (TME) is considered the best treatment for cancer found in the lower third of the rectum and has benefits of complete tumor removal to reduce risk of recurrence and to improve survival.  
Some results are removed in response to a notice of local law requirement. For more information, please see here.

**Abstract**

Colorectal cancer is one of the most prevalent tumours, but with improved treatment and early detection, its prognosis has greatly improved in recent years. However, when the tumour is locally advanced at diagnosis or if there is local recurrence, it is more
